

CHALLENGE »

The non-profit organization was faced with increasing demands for their services and dwindling resources, and needed to increase its pallet storage space capacity, while at the same time, improving accessibility to each load.

SOLUTION »

PeakLogix installed a pallet racking system that includes selective pallet racking and pushback pallet racking. PeakLogix was able to formulate a plan to provide the racking system while not interfering with everyday business.

RESULTS »

The new system increased total pallet storage by 400 pallets in dry storage area. Also, it allows workers to access individual pallets without having to move any others in the process. This saves the non-profit both time and money.

Specs »

- PeakLogix installed a pallet racking system that includes selective pallet racking and pushback pallet racking of 2-deep, 3-deep, and 4-deep storage arrangements
 - The new system increased total pallet rack storage by 32 pallet loads in the cooler, and 56 pallet loads in the freezer
 - It also increased total pallet storage by 400 pallets in dry storage area
