

### CHALLENGE »

EECO wanted to consolidate branch locations into a centralized regional distribution center to avoid the expense of building new facilities or leasing additional warehouse space.

### SOLUTION »

PeakLogix reconfiguration of the current Richmond warehouse will allow EECO to recoup ≈ 42% storage capacity and roll additional business volumes for Franklin, Fredericksburg, Norfolk, South Hill and Winchester branches into the existing facility.

### RESULTS »

- Increased cubic volume capacities.
- Reduced non-value added activities i.e. worker walk, search, reach time.
- Increased staging lanes.

### Project Specs »

Increased storage capacity 42% by:

- Realigning small parts shelving utilizing modular cabinets located at row ends.
- Redesigning bulk and hand-pick shelving areas.
- Adding selective pallet rack for pallet storage and cantilever racking for storage of indoor materials.
- Relocating cable cutting area.
- Creating a staging area along dock door wall.

*“Having successfully worked with PeakLogix at a previous job, it was a “no-brainer” to engage them to help with my endeavor. Superior customer service, engineering, pricing, on-time delivery, performance, and workmanship made the decision quite simple. I’ve not yet met a PeakLogix employee who has failed to extend themselves to ensure their clients’ requirements have been satisfied. EECO will continue to call PeakLogix as our business needs continue to grow.”*
