

CHALLENGE »

Lumber Liquidators store growth required additional capacity for storage of wood flooring trim and accessories, plus the amount of "on-hand" inventory doubled along with SKU growth.

SOLUTION »

For their "bulk" loads, Lumber Liquidators installed two rows of thirteen bays, two deep and five high structural racking to give them additional capacity on their fast moving SKU's. For their "each" items, Lumber Liquidators installed five rows of seven bays single deep, two high with bulk storage above.

RESULTS »

More capacity to support Lumber Liquidators aggressive store growth.

Specs »

- (Two) Thirteen bay, double deep bulk "lift" storage systems five levels high.
- (Five) Seven bay, single deep, "each" picking rack systems, with bulk storage on top.
- Racking, wire decks, pallet supports, safety netting, wall panels and guardrail.

"The system does just what we needed it to do. It came in on time, on budget and PeakLogix included wall panels and guardrails to protect our office wall plus safety netting on the back of the racks to protect our teammates. Shawn Sanders did a detailed, and excellent job as project manger."
