

CHALLENGE »

Creation of floor space for process equipment necessitated a second level office system to relocate existing offices and create additional office space within an extremely short time frame (five to six weeks).

SOLUTION »

Immediate action plan to determine specific layout and project execution in order to meet tight time constraints and have a successful result with minimal disruption of current operations.

RESULTS »

Offices were designed, delivered and installed several weeks prior to the arrival of the key piece of process equipment.

Project Specs »

- 26' x 48' two-story modular office.
- First level open for process equipment.
- Second level a combination of two private offices and a multi-person office area.

"We have worked with Doug and PeakLogix on many projects. The PeakLogix team helped to make this project and past projects successful."
