

## Overview »

- Phillips Automotive needed to maximize storage and accessibility for new parts.
- PeakLogix designed and installed a storage solution that worked within the existing space and left room for 25 percent more inventory.

## CHALLENGE »

Phillips acquired a Volvo dealership in Hampton, VA and needed to maximize storage in the new-parts department. The facility it acquired was a renovated dealership so the existing floor plan limited the storage options. Phillips also needed to make their most frequently used parts easily accessible.

## SOLUTION »

PeakLogix designed an efficient floor plan and then installed Lista Storage Wall and HS-width cabinets to store the auto parts. The layout included outer cabinets that provide access to the most requested parts and technician walkup areas. PeakLogix also installed Equipto shelving to store bulk parts in a separate area.

## RESULTS »

Phillips now has sufficient and accessible storage for current parts as well as room to add 25 percent more inventory. The finished storage plan meets Volvo's storage requirements for a dealership of that size.

## Specs »

- Lista Storage Wall and HS-width cabinets made efficient use of the limited space
- Equipto shelving organized and displayed bulk parts
