

## LINE SHAFT CONVEYORS

### Benefits:

- ◆ Safe
- ◆ Flexible. Rollers can be assembled in sections to rotate in opposite directions in order to achieve bi-directional travel simultaneously on one unit.
- ◆ Clean. The unique drive system eliminates pressure rollers and flat belt surfaces that create dirt and grime gathering areas.
- ◆ Quiet. Line shaft conveyor is much quieter than conventional live roller conveyors because there are fewer moving parts to make noise.
- ◆ Efficient. In addition to performing conventional functions, the line shaft can be easily modified to perform a variety of special functions previously requiring expensive designs.

- Transporting
- Accumulating
- Diverging and converging products
- Maintaining minimum backpressure
- Ease of configuration
- Low cost
- Low decibel output
- Ease of maintenance
