

PUSH - BACK RACK

Provides optimal combination of selectivity and storage density.

Debris-free design makes these racks perfect for food applications.

Allows efficient use of space with limited sacrifice in product accessibility.

Sturdy construction for years of maintenance free operation.

Features:

- Uses telescoping carriages to store pallets up to five deep
- Provides multiple pick facing with extremely high throughput
- Pallets are fed and retrieved from one aisle, reducing picking times and making these racks ideal for applications that require a large number of picking faces
