

Lift and Tilt

High capacity lifting integrated with a tilt module positions material at the optimum height and angle.

Tilt Module

The low profile tilt module can be used alone or added to a lift. Sturdy construction can stand up to abuse from forklift trucks. Continuous hinge provides stability and safety by eliminating pinch points.

Dual Tilt on
Single Lift Module

Features of Heavy Duty Lift & Tilts:

- 100% Air Operated - Incorporates Air Bag™ technology in every lift system for a smooth, controllable operation.
- Patented one-to-one direct lift ratio – reduces scissor wear providing a long lift life.
- Dual captured track safety controls tilting angle and movement
- Dual dampening struts eliminate uncontrolled movement or bouncing
- Safety steel lock block – locks the lift in the raised position.
- Pressure relief valve to prevent over inflation of the air bag.
- Internal exhaust valve increases down stroke speed.
- Rugged construction to withstand fork truck abuse.
- Air requirement 80 psi @ 15 CFM

Five year limited warranty on the air bag.
