

CASE STUDY: CUSTOMIZED STORAGE SOLUTION

Phillips Volvo

The Challenge

The Phillips Volvo dealership in Hampton, VA needed to maximize storage in its new-parts department because its existing floor plan limited storage options. Phillips Volvo also needed to make its most frequently used parts easily accessible.

The Solution

PeakLogix designed an efficient floor plan and then installed Lista Storage Wall and HS-width cabinets to store the auto parts, including outer cabinets to provide access to the most requested parts and technician walkup areas, and Equipto shelving to store bulk parts.

The Results

Phillips now has sufficient and accessible storage for current parts as well as **room to add 25% more inventory**. The finished storage plan meets Volvo's storage requirements for a dealership of that size.

PROJECT SPECS:

Lista Storage Wall and HS-width cabinets made efficient use of the limited space.
Equipto shelving organized and displayed bulk parts.
